```apex
public class AccountHandler {
    public static Account insertNewAccount(String name) {
        Account account=new Account(Name=name);
        try {
            insert account;
        }catch(DmlException ex) {
            system.debug('ex:' + ex.getMessage());
            return null;
        }

        return account;
    }
}
```
